

Samuel Barbeaux

Full stack developer specializing in designing and building robust, high-performance REST APIs and intuitive, user-friendly front-end interfaces.

Summary

With over 15 years of experience in full stack development, I design and integrate robust, scalable, and secure REST APIs. My work sits at the crossroads of software architecture and product engineering, transforming complex challenges into concrete solutions.

As a full stack developer at Henrotte s.a., a company specializing in logistics services, I work across the entire lifecycle of business software – from design to maintenance – to ensure technical solutions are aligned with operational needs.

Over the years, I have collaborated with a diverse range of professionals, integrated modern cloud technologies, and designed scalable architectures tailored to business challenges. My rigorous, curious, and independent approach guarantees reliable, secure, and solutions centered on the user experience.

When I'm not immersed in technical challenges, I enjoy exploring and experimenting with new technologies and examining emerging trends, seeking ways to optimize how we work.

Experience

Henrotte s.a. company

Full-Stack Developer & Technical Analyst

Henrotte s.a.

January 2007 – Present

Alleur, Liège, Belgium

Design and development of a transportation management system (TMS), from the backend layer (REST API) to the web user interface. Proactive and scalable maintenance of an after-sales service (SAV) system. Comprehensive IT support covering software, hardware, and network-related issues.

- PHP, Node.js, Symfony & API Platform, PostgreSQL & DynamoDB, Javascript & jQuery, Bootstrap & Tailwind, Jira & Bitbucket, CI/CD, Services cloud AWS

Education

University of Liège

Computer science

ULiège

Graduated in 2006

Bachelor of science in computer science

Education preparing for a career as a systems designer capable of analyzing, developing, and testing complex information systems, integrating hardware, software, project management, and documentation across diverse domains.

- Programming, Algorithms, Applied Mathematics, Databases, Systems, Networks

Projects

Transportation Management Software (TMS)

January 2010 – Present

Development of a transport management system including order import, catalog management, storage, route planning, delivery tracking, and document generation. Integration with optimization tools such as Ortec and customer portals. Design and implementation of dashboards for logistics monitoring and optimization.

Booking Management System (BMS)

March 2015 – Present

Design and implementation of a time slot reservation system to orchestrate and optimize inbound and outbound flows. The solution takes into account operational constraints (areas, volumes, resources) and integrates seamlessly with enterprise software and customer portals.

Cloud Architect & DevOps

September 2020 – Present

Designing scalable and resilient AWS cloud architectures, integrating CloudFormation, Lambda (serverless), API Gateway, S3, DynamoDB, CloudWatch, and EC2. Deployment following DevOps best practices, including CI/CD, IaC, monitoring, and security.

Helpdesk & Technical Support

January 2021 – Present

Comprehensive technical support: providing assistance with internal business software, Microsoft 365 tools, and computer hardware; managing incidents via a ticketing system from prioritization through to resolution; conducting both on-site and remote interventions to ensure business continuity.

Skills

Architecture & Development

Web architecture design, functional analysis, resource evaluation, deliverable scheduling, and full-stack development.

- Monolithic, Microservices, Serverless, SOA, CRUD, PHP Frameworks, JavaScript Frameworks & Libraries, CSS Frameworks

Programming languages

Expertise in web programming languages, scripting, and automation.

- PHP, JavaScript, Python, HTML, CSS, Bash

API & Interoperability

API design and implementation for interoperability across heterogeneous systems.

- REST, SOAP, Open API Specs

Cloud & DevOps

Deployment of serverless solutions on AWS, infrastructure as code, CI/CD pipelines, and containerization.

- Lambda, API Gateway, S3, SQS, CloudFormation, CI/CD, Docker

Support & maintenance

User support, incident management, and application maintenance.

- Helpdesk, Ticketing

Data systems & research

Expertise in relational and NoSQL databases, including optimization and indexing.

- PostgreSQL, PL/pgSQL, DynamoDB

Testing & Software Quality

Tests unitaires et fonctionnels fiables.

- PHPUnit, Postman, Newman, PHPStan

Methodologies & Collaboration

Agile project management in a collaborative environment, leveraging appropriate tools.

- Agile, Git, Jira, Confluence, Microsoft 365

Languages

French

Native language.

Technical English

Documentation, written communications.

Interests

Research and Development

Raspberry, Typescript, Java, Go, React.

Artificial intelligence & automation

Generative AI (LLM, Ollama, Copilot), low-code/no-code automation (n8n).
